

First Christian Church

Completed 1942 - Renovation 2002

- First Christian Church features a 266 foot high campanile (this Italian word for freestanding bell tower)
- **Goal:** Your task is to create a bell tower that is at least 2 feet tall.
- **Think About Your Structure:** A sturdy base is important to keeping the structure secure!
- **Hint:** Create a wide and sturdy base for the structure. Make sure that it is stable before building up!
- **Now What?** How could you make the tower taller? Would you need to change the width, base or any part of the tower to make it more stable?

Draw your sketch here (use back if needed)
