

North Christian Church

Completed 1964

- This church has a sloping roof that blends with the landscaped earth-mound which surrounds it.
- **Goal:** Your task is to create a structure with a sloping roof.
- **Think About Your Structure:** How will you create your sloping roof? Are you going to make the roof out of one solid material or piece it together?
- **Hint:** One side of the structure will need to be taller to create the sloping roof.
- **Now What?** Would the amount of slope in the roof change your structure by making it more sturdy or less sturdy? Look at your structure from different angles. How does it change with the sloping roof?

- Pipe Cleaners
- Cardboard Boxes
- $\frac{1}{2}$ Cardboard Piece
